CREATE CATALOG TASK ACTION | Team ID 6ab4dedab5170a9b58b54517

## Configuration Overview

The Create Catalog Task action performs the central automation activity. It creates the operational task required for laptop configuration using the Requested Item record.

## Key Configuration Steps

- Under Actions, click Add an action.
- Search for “Create Catalog Task” and select it.
- Use the Requested Item Record in the Request item field.
- The table is populated as a Catalog Task.
- Set the short description to “Laptop need to Configured”.
- Set the description field to the same value.
- Set Assignment group to Hardware.
- Set Approval to Approved.
- Leave remaining fields at their default values and select Done.

# CREATE CATALOG TASK ACTION – DESCRIPTION

## Implementation Details

The source screenshot shows the Create Catalog Task action with the Requested Item input, short description, Hardware assignment group, and Approved value. These settings define the task that will be generated after the Service Catalog workflow reaches the required condition.

## Project Context

This configuration forms part of the Standard Laptop procurement automation workflow. The project connects the Service Catalog request, approval process, Flow Designer automation, Requested Item, and generated Catalog Task to reduce manual intervention and support timely laptop configuration.

## Verification

The implementation should be checked in ServiceNow after configuration. The relevant configuration should be visible, the flow should be active where applicable, and the Standard Laptop request should produce the expected Catalog Task values. The final task should reflect the configured values and assignment.

## Expected Result

The configuration contributes to a streamlined procurement process in which the Standard Laptop request can progress through approval and automated task creation, with the Hardware team receiving the configuration work.
